

**Laporan Praktikum
Pemrograman Web 2
Pertemuan 10
File Upload**

Nama Mahasiswa: Tegar Raditya Hikmawan

NIM:24/535872/SV/24321

Kelas: B2

Dosen Pengampu: Dinar Nugroho Pratomo, S.Kom., M.IM., M.Cs.

**Sekolah Vokasi
Universitas Gadjah Mada
Yogyakarta
2025**

Bab 1. Latihan

1. Tambahkan kolom status lamaran (Pending, Accepted, Rejected) agar admin bisa memperbarui status pelamar.

```
1 <td>
2     @php
3         $statusClass = [
4             'Pending' => 'badge bg-warning text-dark',
5             'Accepted' => 'badge bg-success',
6             'Rejected' => 'badge bg-danger'
7         ];
8     @endphp
9     <span class="{ { $statusClass[$app->status] ?? '
10         badge bg-secondary' }}">
11         {{ $app->status }}
12     </span>
</td>
```

2. Bagaimana agar Admin bisa mengubah postingan Jobs

Menambahkan method edit untuk jobs

```
1 public function edit(string $id)
2 {
3     $job = Job::findOrFail($id);
4
5     return view('jobs.edit', [
6         'job' => $job,
7     ]);
8 }
9
10 public function update(Request $request, string $id)
11 {
12     $request->validate([
13         'title' => 'required',
14         'description' => 'required',
15         'location' => 'required',
16         'company' => 'required',
17         'logo' => 'nullable|image|mimes:jpg,png,jpeg|max:2048',
18         'job_type' => 'required|string|max:255',
19     ]);
20 }
```

```
21     $job = Job::findOrFail($id);
22
23     // Handle logo upload: remove old file if a new
24     // one is provided
25     if ($request->hasFile('logo')) {
26         // delete old logo if exists
27         if ($job->logo && Storage::disk('public')->
28             exists($job->logo)) {
29             Storage::disk('public')->delete($job->logo
30             );
31         }
32
33         $logoPath = $request->file('logo')->store('
34             logos', 'public');
35         $job->logo = $logoPath;
36     }
37
38     $job->title = $request->title;
39     $job->description = $request->description;
40     $job->location = $request->location;
41     $job->company = $request->company;
42     $job->salary = $request->salary;
43     $job->job_type = $request->job_type;
44
45     $job->save();
46
47     return redirect()->route('jobs.index')->with('
48         success', 'Lowongan berhasil diperbarui');
49 }
```

3. Bagaimana agar User bisa melihat detail lowongan sebelum dia upload CV

Menambahkan method show untuk setiap lowongan

```
1 public function show(string $id)
2 {
3     $job = Job::findOrFail($id);
4
5     $application = null;
6
7     if (auth()->check()) {
8         $application = Application::where('job_id',
9             $job->id)
10             ->where('user_id', auth()->id())
11             ->first();
12     }
13
14     return view('jobs.show', compact('job', '
15         application'));
16 }
```

```

1 @section('content')
2 <div class="container mb-3 d-flex justify-content-end"
3   >
4   <a class="btn btn-secondary" href="{ route('jobs.
5     index') }}">Back</a>
6 </div>
7
8 <div class="container">
9   {{-- Job Header Section --}}
10  <div class="d-flex align-items-center gap-3 mb-4">
11    company }} logo"
13      width="120"
14      class="border p-2 bg-white rounded">
15
16    <div>
17      <h2 class="mb-1">{{ $job->title }}</h2>
18
19      @if (auth()->check() && strtolower(auth()
20        ->user()->role) === 'admin')
21        <a href="{ route('applications.filter
22          ', $job->id) }}" class="text-
23            decoration-none fw-bold text-
24              primary">
25          View Applicants
26        </a>
27      @endif
28    </div>
29  </div>
30
31  {{-- Application Status Box --}}
32  @if($application)
33    <div class="alert alert-info mt-3">
34      <h5 class="mb-2">Your Application Status</
35        h5>
36
37      <p class="mb-1">
38        <strong>Status:</strong>
39        <span class="badge
40          @switch($application->status)
41            @case('Pending') bg-warning
42              @break
43            @case('Accepted') bg-success
44              @break
45            @case('Rejected') bg-danger
46              @break
47            @default bg-secondary

```

```

39         @endswitch
40     ">
41         {{ $application->status }}
42     </span>
43 </p>
44
45     @if($application->notes)
46         <p class="mb-2"><strong>Notes:</strong>
47             > {{ $application->notes }}</p>
48     @endif
49
50     <a href="{ asset('storage/' .
51         $application->cv) }"
52         class="btn btn-outline-primary btn-sm"
53         download>
54         Download Your CV
55     </a>
56 </div>
57 @endif
58
59 {{-- Job Details Card --}}
60 <div class="card mt-4">
61     <div class="card-body">
62
63         <p><strong>Company:</strong> {{ $job->
64             company }}</p>
65         <p><strong>Description:</strong> {{ $job->
66             description }}</p>
67         <p><strong>Location:</strong> {{ $job->
68             location }}</p>
69         <p><strong>Salary:</strong> {{ $job->
70             salary }}</p>
71         <p><strong>Job Type:</strong> {{ $job->
72             job_type }}</p>
73
74     {{-- Application Form --}}
75     <h5 class="mt-4">Apply for This Job</h5>
76     <form action="{ route('apply.store', $job
77         ->id) }"
78         method="POST"
79         enctype="multipart/form-data"
80         class="d-flex gap-2">
81
82         @csrf
83
84         <input type="file"
85             name="cv"
86             class="form-control form-
87                 control-sm"

```

```

80         required
81         {{ (auth()->check() &&
            strtolower(auth()->user()->
            role) === 'admin') ||
            $application ? 'disabled' :
            '' }}>
82
83         <button type="submit"
84             class="btn btn-primary btn-sm"
85             {{ (auth()->check() &&
                strtolower(auth()->user()->
                role) === 'admin') ||
                $application ? 'disabled' :
                '' }}>
86             Lamar
87         </button>
88     </form>
89
90     @if(!$application)
91         <small class="text-muted">Upload your
92             CV in PDF format.</small>
93     @endif
94 </div>
95 </div>
96
97 </div>
98 @endsection

```

4. Bagaimana agar tombol Tambah Lowongan hanya bisa diakses oleh Admin

Kita bisa melakukannya, dengan salah satu caranya adalah dengan secara langsung mengecek role dari user.

```

1  @if(auth()->check() && strtolower(auth()->user()->role
2      ) === 'admin')
3      <div class="d-flex justify-content-between">
4          <a href="{{ route('jobs.create') }}" class="
5              btn btn-success mb-3">Tambah Lowongan</a>
6          <a href="{{ route('applications.index') }}"
7              class="btn btn-primary mb-3">Daftar Pelamar
8          </a>
9      </div>
10 @endif

```

5. Tambahkan aksi agar Admin bisa menerima dan menolak pelamar

Buat kolom aksi di tabel.

```

1  <td>
2      <div class="d-flex gap-2">
3          {{-- ACCEPT --}}

```

```

4         <form action="{{ route('applications.update',
5             $app->id) }}" method="POST">
6             @csrf
7             @method('PUT')
8             <input type="hidden" name="status" value="
9                 Accepted">
10             <button class="btn btn-success btn-sm"
11                 type="submit">Terima</button>
12         </form>
13
14         {{-- REJECT --}}
15         <form action="{{ route('applications.update',
16             $app->id) }}" method="POST">
17             @csrf
18             @method('PUT')
19             <input type="hidden" name="status" value="
20                 Rejected">
21             <button class="btn btn-danger btn-sm" type=
22                 ="submit">Tolak</button>
23         </form>
24     </div>
25 </td>

```

buat route untuk mengarahkan ke method yang benar.

```

1 // Update application status
2 Route::put('/applications/{application}', [
3     ApplicationController::class, 'update'])->name('
4     applications.update');

```

Buat methode yang akan memperbarui status pelamaran.

```

1 public function update(Request $request, string $id)
2 {
3     $application = Application::findOrFail($id);
4     $application->status = $request->input('status');
5     $application->save();
6
7     return back()->with('success', 'Status aplikasi
8         berhasil diperbarui.');
```

6. Tambahkan tombol Download CV di tabel daftar pelamar

```

1 <td>
2     <a href="{{ asset('storage/' . $app->cv) }}"
3         target="_blank"
4         class="btn btn-sm btn-primary">
5         Lihat CV
6     </a>
7     <a href="{{ asset('storage/' . $app->cv) }}"

```

```

8         class="btn btn-outline-warning btn-sm"
9         download>
10        Download
11    </a>
12</td>

```

Dengan tambahan atribut 'download' pada element <a>, kita sudah bisa melakukan download seperti yang kita harapkan.

7. Buat filter export agar hanya menampilkan pelamar untuk satu lowongan tertentu.

Untuk memfilter:

```

1 <div class="d-flex gap-2 mb-4">
2     <select id="exportSelect" class="form-select">
3         <option value="">Export Semua Pelamar</option>
4         @foreach($jobs as $job)
5             <option value="{{ route('applications.
6                 filter', $job->id) }}">
7                 Export: {{ $job->title }}
8             </option>
9         @endforeach
10    </select>
11    <a href="{{ route('applications.filter', $job->id)
12        }}" class="btn btn-primary">Filter</a>
13    <a href="{{ route('applications.export') }}" class
14        ="btn btn-warning">Export</a>
15</div>

```

Method dalam ApplicationsController:

```

1 public function filter(string $id)
2 {
3     $selectedJob = Job::findOrFail($id);
4
5     // hanya aplikasi untuk job ini
6     $applications = Application::with('user', 'job')
7         ->where('job_vacancy_id', $id)
8         ->get();
9
10    // untuk dropdown
11    $jobs = Job::all();
12
13    return view('applications.filter', compact(
14        'applications', 'jobs', 'selectedJob'
15    ));
16 }

```

8. Buatkan template import yang bisa didownload oleh admin

Buat Class baru untuk Export template. Lalu didalamnya diisi:

```
1 class JobsTemplateExport implements FromArray,  
    WithHeadings  
2 {  
3     public function headings(): array  
4     {  
5         return [  
6             'title',  
7             'description',  
8             'location',  
9             'company',  
10            'salary',  
11        ];  
12    }  
13  
14    public function array(): array  
15    {  
16        return [  
17            [  
18                'Software Engineer',  
19                'Responsible for developing software  
20                ...',  
21                'Jakarta',  
22                'Tech Corp',  
23                '15000000',  
24            ],  
25        ];  
26    }  
}
```

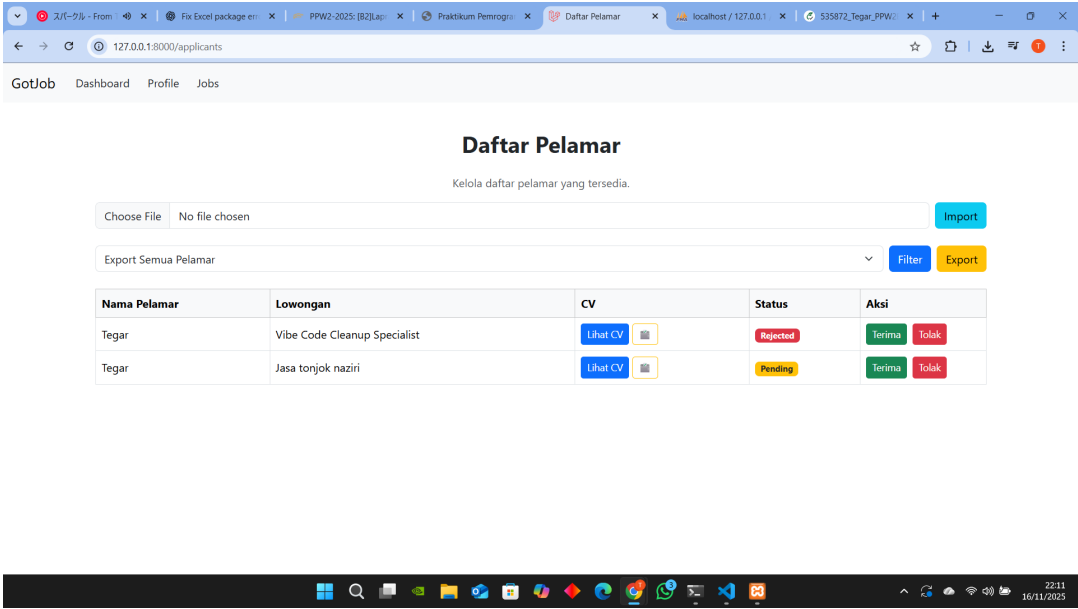

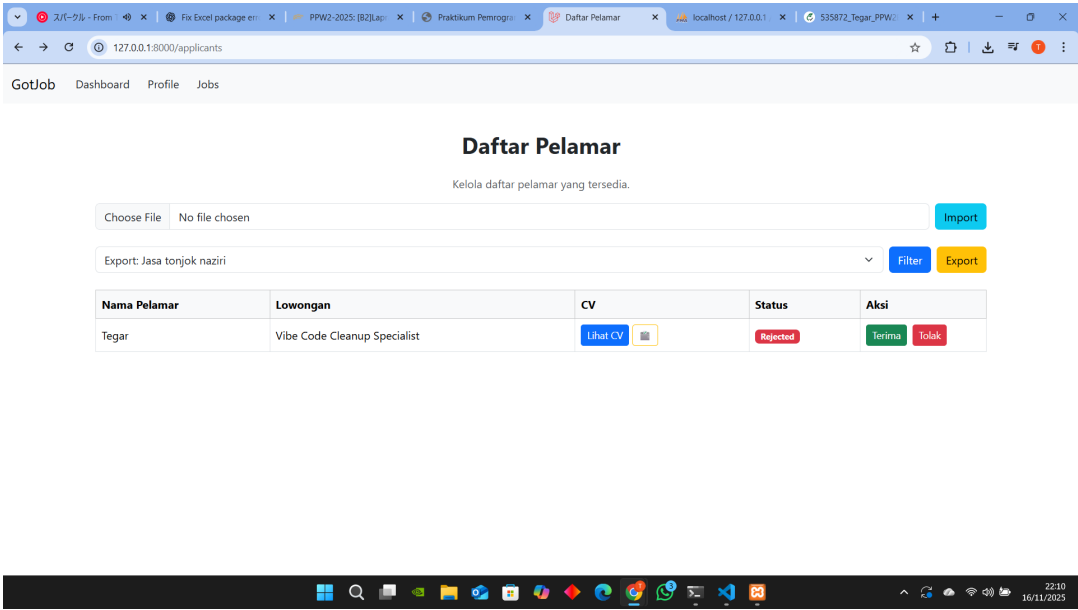

Tambahkan di JobController:

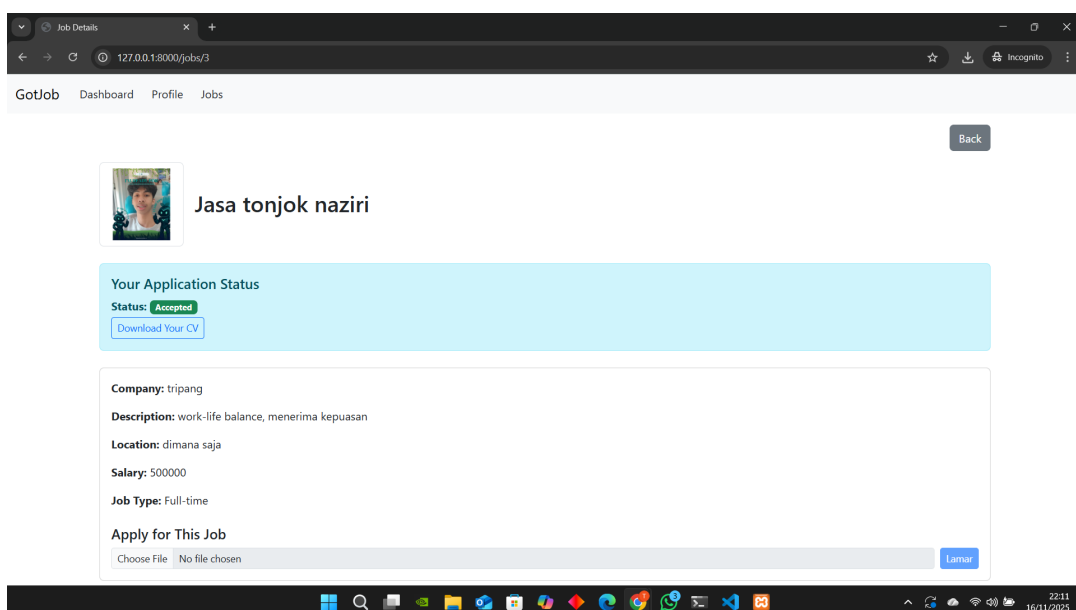

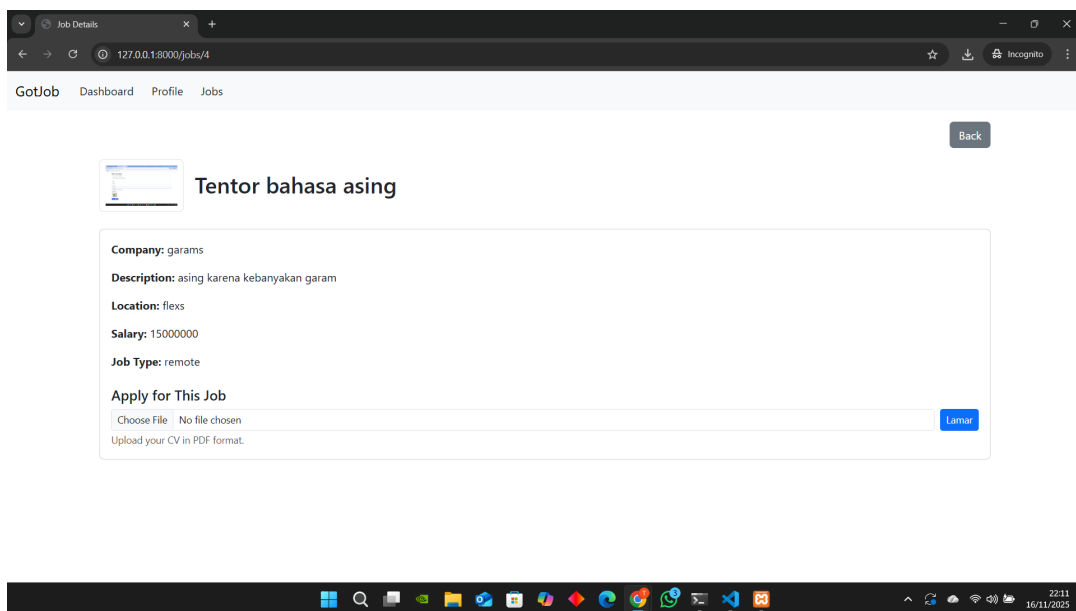

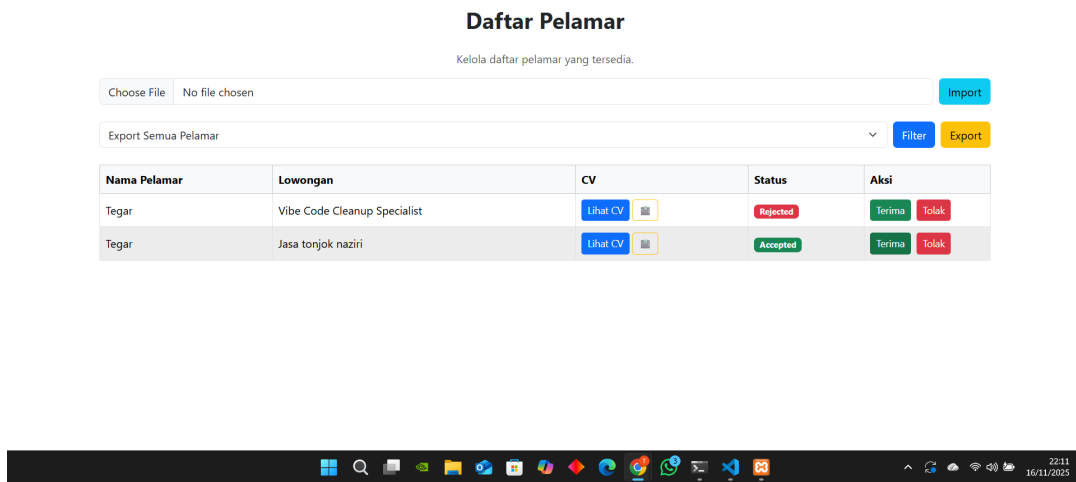

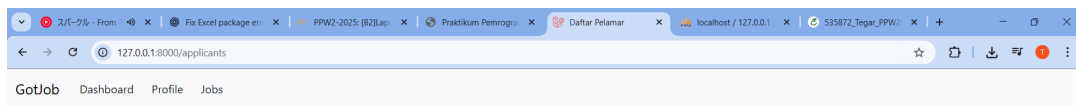

```
1 public function downloadImportTemplate()  
2 {  
3     return Excel::download(new JobsTemplateExport, '  
4         jobs-import-template.xlsx');  
5 }
```

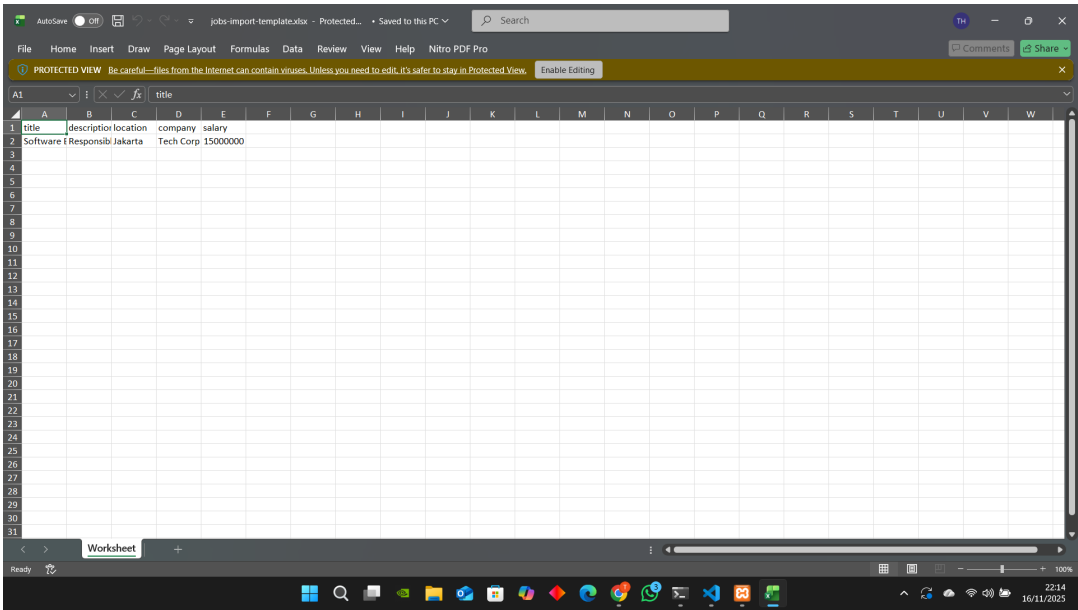

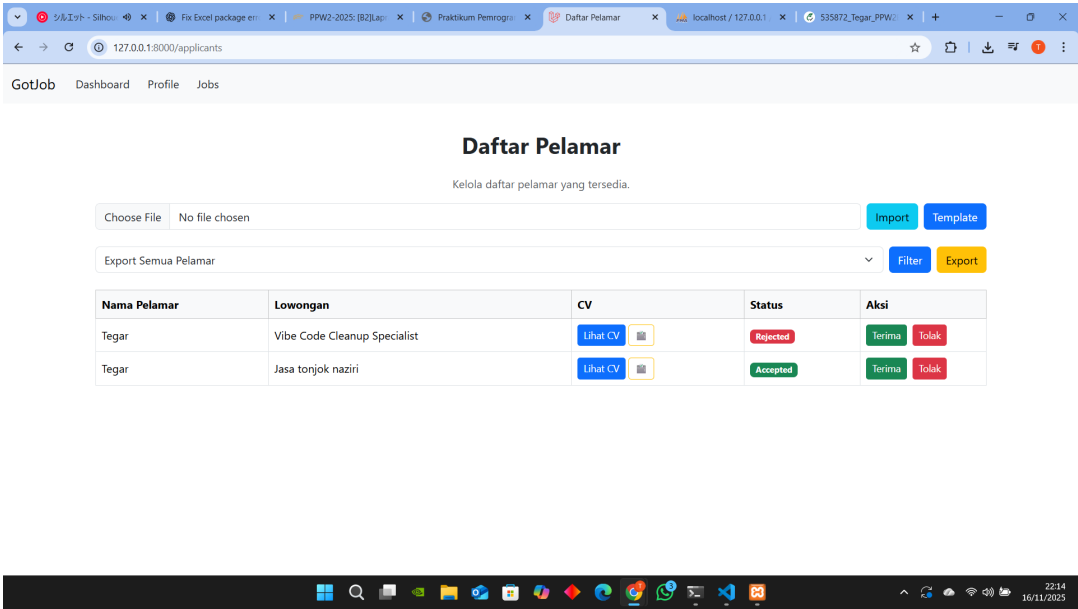

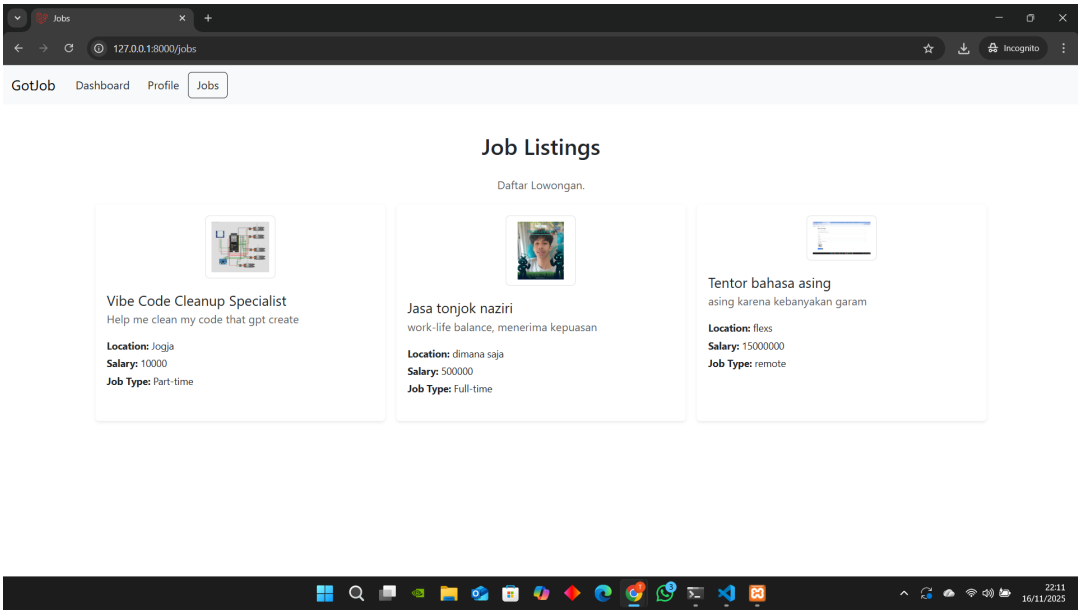

Pemanggilan dalam view:

```
1 <a href="{{ route('jobs.import.template') }}"  
2     class="btn btn-primary">  
3     Template  
4 </a>
```
