

Ujian Akhir Semester

Praktikum pemrograman Web 2

1. Di folder `app/Http/Controllers/JobController.php` terdapat CRUD dasar untuk lowongan kerja.
Kode controller:

```
public function index(Request $request)
{
    $search = $request->input('search');

    $q = Job::query();

    if ($search) {
        $q->where(function($s) use ($search) {
            $s->where('title','like','%"$search%" )
            ->orWhere('company','like','%"$search%"');
        });
    }

    $jobs = $q->orderBy('created_at', 'desc')
        ->paginate(10)
        ->appends($request->query());

    return view('jobs.index', compact('jobs', 'search'));
}
```

View yang diperbarui:

```
<x-app-layout>
  <x-slot name="header">
    <h2 class="font-semibold text-xl text-gray-800 leading-tight">
      {{ __('Daftar Lowongan') }}
    </h2>
  </x-slot>

  <div class="py-12">
    <div class="max-w-7xl mx-auto sm:px-6 lg:px-8 space-y-6">
      <div class="bg-white overflow-hidden shadow-sm sm:rounded-lg">
        <div class="p-6 text-gray-900">
          <div class="flex items-center justify-between mb-6">
            <p class="text-lg font-medium text-gray-700">Kelola
lowongan kerja yang tersedia.</p>

            {{-- Form search --}}
            <form action="{{ route('jobs.index') }}" method="GET"
class="flex w-full gap-2 sm:w-auto">
```

[illegible]

```

class="h-12 w-12 rounded
object-cover"

width="100px" />
@else
<span class="text-xs text-gray-
400">Tidak ada logo</span>

@endif
</td>
<td class="px-4 py-3 text-sm text-
gray-700">

<div class="flex items-center gap-
2">

<a href="{{ route('jobs.show',
$job->id) }}"

class="inline-flex items-
center rounded-md border border-transparent bg-yellow-500 px-3 py-1 text-xs
font-semibold transition hover:bg-yellow-600 focus:outline-none focus:ring-2
focus:ring-yellow-500 focus:ring-offset-2">

Show

</a>
{{-- Jika Admin --}}
@if(Auth::check() &&
Auth::user()->role === 'admin')

<a href="{{
route('applications.index', $job->id) }}"

class="inline-flex items-
center rounded-md border border-transparent bg-yellow-500 px-3 py-1 text-xs
font-semibold transition hover:bg-yellow-600 focus:outline-none focus:ring-2
focus:ring-yellow-500 focus:ring-offset-2">

Daftar Pelamar

</a>
<a href="{{ route('jobs.edit',
$job->id) }}"

class="inline-flex items-
center rounded-md border border-transparent bg-yellow-500 px-3 py-1 text-xs
font-semibold transition hover:bg-yellow-600 focus:outline-none focus:ring-2
focus:ring-yellow-500 focus:ring-offset-2">

Edit

</a>
<form action="{{
route('jobs.destroy', $job->id) }}" method="POST" onsubmit="return
confirm('Hapus data?');">

@csrf
@method('DELETE')
<button type="submit"
class="inline-flex
items-center rounded-md border border-transparent bg-red-600 px-3 py-1 text-xs

```

```
font-semibold transition hover:bg-red-700 focus:outline-none focus:ring-2
focus:ring-red-600 focus:ring-offset-2">
        Hapus
    </button>
</form>
@endif
</div>
</td>
</tr>
@empty
<tr>
    <td colspan="6" class="px-4 py-6 text-
center text-sm text-gray-500">
        Belum ada lowongan yang tersedia.
    </td>
</tr>
@endforelse
</tbody>
</table>

{{-- Job links --}}
@if($jobs->hasPages())
<div class="mt-6">
    {{ $jobs->links() }}
</div>
@endif

</div>
</div>
</div>
</div>
</x-app-layout>
```

Dalam method `index()`, kita panggil beberapa query tambahan, yang nantinya bisa digunakan view pages untuk ditampilkan.

2. Dalam modul bagian File Upload dijelaskan proses CRUD Job + upload logo. Namun dalam repository, method store() masih belum lengkap.

```
3.     public function store(Request $request)
4.     {
5.         $request->validate([
6.             'title' => 'required',
7.             'description' => 'required',
8.             'location' => 'required',
9.             'company' => 'required',
10.            'salary' => 'required',
11.            'logo' => 'image|mimes:jpg,png,jpeg|max:2048'
```

```

12.     });
13.
14.     $logoPath = null;
15.     if ($request->hasFile('logo')) {
16.         $logoPath = $request->file('logo')->store('logos',
'public');
17.     }
18.
19.     Job::create([
20.         'title' => $request->title,
21.         'description' => $request->description,
22.         'location' => $request->location,
23.         'company' => $request->company,
24.         'salary' => $request->salary,
25.         'logo' => $logoPath
26.     ]);
27.
28.     return redirect()->route('jobs.index')->with('success',
'Lowongan berhasil ditambahkan');
29. }

```

Cukup pastikan method store() menyimpan kolom yang diinginkan serta path logo yang disimpan di folder public.

30. Fitur Apply Job telah dijelaskan di modul, namun di repository hanya tersedia sebagian. Form upload CV (di jobs.show):

```

{{-- Form Upload CV --}}
<h5 class="mt-4">Apply for This Job</h5>
<form action="{{ route('apply.store', $job->id) }}"
    method="POST"
    enctype="multipart/form-data"
    class="d-flex gap-2">

    @csrf

    <input type="file"
        name="cv"
        class="form-control form-control-sm"
        required
        {{ (auth()->check() && strtolower(auth()->user()->role)
=== 'admin') || $application ? 'disabled' : '' }}>

    <button type="submit"
        class="btn btn-primary btn-sm"
        {{ (auth()->check() && strtolower(auth()->user()-
>role) === 'admin') || $application ? 'disabled' : '' }}>
        Lamar
    </button>
</form>

```

Method store:

```
public function store(Request $request, $jobId)
{
    $request->validate([
        'cv' => 'required|mimes:pdf|max:2048',
    ]);

    $cvPath = $request->file('cv')->store('cvs', 'public');

    $application = Application::create([
        'user_id' => auth()->id(),
        'job_id' => $jobId,
        'cv' => $cvPath,
    ]);

    // Kirim email ke user
    Mail::to(auth()->user()->email)->send(new JobAppliedMail($application-
>job, auth()->user()));

    sleep(10);

    // Kirim notifikasi ke admin
    $admin = User::where('role', 'admin')->first();
    $admin->notify(new NewApplicationNotification($application));

    return back()->with('success', 'Lamaran berhasil dikirim! Cek email
Anda.');
```

Menambahkan validasi file cv dengan validate(), serta pastikan menyimpannya ke table yang benar.

31. Di repository, file ApplicationsExport.php belum lengkap.

ApplicationsExport:

```
32.<?php
33.
34.namespace App\Exports;
35.
36.use App\Models\Application;
37.use Maatwebsite\Excel\Concerns\FromCollection;
38.use Maatwebsite\Excel\Concerns\WithHeadings;
39.
40.class ApplicationsExport implements FromCollection, WithHeadings
41.{
42.    protected $jobId;
43.
44.    public function __construct($jobId = null)
45.    {
46.        $this->jobId = $jobId;
```

```

47.     }
48.
49.     public function collection()
50.     {
51.         $query = Application::with(['user', 'job']);
52.
53.         if ($this->jobId) {
54.             $query->where('job_vacancy_id', $this->jobId);
55.         }
56.
57.         return $query->get()->map(function ($app) {
58.             return [
59.                 'Applicant' => $app->user->name,
60.                 'Job' => $app->job->title,
61.                 'Status' => $app->status,
62.                 'Submitted At' => $app->created_at->format('Y-m-d
H:i'),
63.             ];
64.         });
65.     }
66.
67.     public function headings(): array
68.     {
69.         return ['Applicant', 'Job', 'Status', 'Submitted At'];
70.     }
71. }
72.

```

Tombol Export Admin:

```

@if(Auth::check() && Auth::user()->role === 'admin')
    <span href="{{ route('applications.export') }}"
        class="inline-flex items-center justify-center rounded-md bg-green-600
px-4 py-2 text-sm font-semibold shadow transition hover:bg-green-700
focus:outline-none focus:ring-2 focus:ring-green-600 focus:ring-offset-2">
        Export Excel
    </span>
@endif

```

73. Tambahkan endpoint berikut pada routes/api.php, kemudian buat method show() di JobApiController yang mengembalikan data dalam format JSON.

Route baru:

```
Route::get('/jobs/{job}', [JobApiController::class, 'show']);
```

Berada di group middleware auth:sanctum bersama route jobs lainnya.

Method show:

```

public function show(JobVacancy $job)
{

```

```
$job = JobVacancy::findOrFail($job->id);  
return response()->json($job);  
}
```
